Requirements

1. Fetch data from external API and reflect the properties in recipe cards (to create cards, bootstrap will be used)

2. Give sorting options (quick menu, low-carb menu, high -protein menu, etc)

3. User can search recipes with keywords

4. User can post their original recipe and once user click on submit it wil create a new recipe card and displayed in the Users Recipe section.
   (When a new recipe submitted, this will be added in an internal JSON file through JSON server and fetch from the internal file to reflect in the browser.)

5. Log in/ Sign in is optional but if user logged in she/ he can write reviews on each recipe and other logged in users can respond to the review also.
